

MONOPOLY 3D

Minecraft Edition

Discord Activities Integration Proposal

Why MONOPOLY 3D is Perfect for Discord

A real-time multiplayer game tailor-made for game nights with friends on Discord.

- **Short & Fast-Paced Sessions:** 30 to 45 minutes maximum (compared to several hours for the traditional physical version).
- **2 to 4 Simultaneous Players:** Perfectly sized for small Discord voice channels and tight-knit friend groups.
- **Authoritative Server Architecture:** Zero cheating, flawless synchronization, and no room for bad faith.
- **Immersive 3D Universe:** A low-poly, Minecraft-inspired aesthetic featuring a dynamic day/night cycle, 3D houses/hotels, and smooth camera controls.
- **3 Unique Classes:** Thief, Lucky, and Banker classes adding high replayability and instant tactical fun.
- **Clean & Modern Interface:** Features an intuitive HUD, circular turn timers, and responsive pop-ups.

A Seamless Discord Integration

MONOPOLY 3D provides immense value to the Discord Activities ecosystem because:

- The game engine is already **fully real-time multiplayer via WebSocket**, making it highly adaptable to the Discord Embedded App SDK (Activities SDK).
- The backend is **authoritative and secure** → ensuring no desynchronization or local client cheating.
- Match formats are **bite-sized and highly engaging** → ideal for casual drop-in/drop-out evening sessions.
- The Minecraft-inspired 3D art style is **highly appealing** to Discord's core demographic (young adults, students, and gamers).
- The client-side application is already heavily **optimized for web performance**, ensuring smooth framerates even on low-end hardware.

Experience the Game**Watch the 2-Minute Trailer****Ready to Integrate?**

We are a team of third-year Computer Science students (*L3 Informatique*) at the **University of Strasbourg**. We would be thrilled to collaborate with the Discord Activities team to bring MONOPOLY 3D to users worldwide.
